MEMO TO: FILE

RE: CHEMICAL RECOVERY

CC: Richard J. Bergman, Safety-Service Director
Charles B. Coen, Supt. Waste Water Pollution Control Plant
Lonny G. Shippy, City Engineer
Ernest G. Bartha, Health Commissioner & City Chemist
Archie Evans, Supt. Building Dept.

FROM: Greg Worcester, Asst. City Chemist

SUBJECT: Boom in river

PRESENT: Jim Jackson, Chemical Recovery
Greg Worcester, Asst. City Chemist

DISCUSSION:

- A. Mr. Jackson was informed that the boom placed in the river to contain solvents entering the water was partially submerged. This situation needed to be corrected to prevent any solvents or oils from entering the river. At the time of the inspection solvents or oils were not observed on either side of the boom.
- B. Chemical Recovery is slowly removing old drums from their property. It is difficult to find landfills willing to accept the contents of the drums. Chemical Recovery has found one landfill that will accept some of their wastes. It is located in Michigan.
- C. Chemical Recovery hasn't found a place to dispose of their chlorinated compounds.
